

# 2000C Safe Deposit Lockers

Protection of High Value Assets

Rosengrens 2000C is a safe deposit locker range utilising the vault space with attractively designed boxes and cost effective visiting routines. 2000C is fast and easy to install in varying vault types: concrete strong rooms, prefabricated strong rooms, safes or free-standing in hotel lobbies. To suit varying customer demands and utilise the vault heights, three models of the 2000C are available as well as several box heights. Each model offers several different combinations of boxes in varying colours or stainless steel finish. A manual locking system or electronic operation by means of the Rosengrens box management system RBM is available.

# 2000C Safe Deposit Lockers

## Protection of High Value Assets

**Features** Rosengrens 2000C is a safe deposit locker range utilizing the vault space with attractively designed boxes and cost effective visiting routines. To suit varying customer demands the 2000C are available in three models with column heights in 1720 mm, 2020 mm and 2220 mm. For other demands 2000C can be delivered in specified heights. Varying box heights are also available from 50 up to 600 mm. Additionally double width columns are available for large boxes.

The standard cassette is of soft fibre material with gold associated edging for efficiently utilizing the box volume. The cassette is standard for all box heights up to 300 mm. As an option the cassettes can be delivered in steel/plastic. Extra protection for storing of data media can also be provided.

**Security** The 2000C box door has a unique security design to protect against all kinds of physical attack. The units are approved in accordance with the stringent security standard, as laid down by the Swedish Banks' Security Committee.

**Locking** A manual locking system or electronic operation by means of Rosengrens Box Management System RBM can be delivered. The RBM system is a modular computerised system for cost effective administration and operation of safe deposit lockers. The manual operated system is fitted standard with the option of adding the RBM system later.

- The client lock 32A815 is as option either delivered from the factory or simply installed from a sealed container at the time the box is rented, to avoid illegal copies of the clients key.
- The high technology electronic lock for each box is connected to the RBM system and alarms immediately by a physical or manipulation attempt against the box as well as provides recording of all events for audit trail.

**Design** The 2000C range has an attractive design combined with a choice of colours or stainless steel enabling integration with the bank interior for the clients to recognize the bank identity even in the vault. The flexible layout possibilities in the 2000C enables the expensive vault area to be well utilized as well as ensure an attractive environment.

**Quality and environmental management systems** Rosengrens safe deposit lockers 2000C are all manufactured in accordance with the ISO 9001 quality management system and the ISO 14001 environmental management system.

**Quality control** Rosengrens 2000C range has been developed and continuously tested according to the Rosengrens Quality Guidelines which include several criteria relating to existing European norms with the aim of guaranteeing quality and assuring customers that the products live up to the highest expectations.
